University of Asia Pacific

CEP MAPPING:

Program Outcomes (PO's):

PO's	PROGRAM OUTCOMES	DESCRIPTION
PO a	ENGINEERING KNOWLEDGE	Through this project, we gained valuable insights, developed problem-solving strategies, explored diverse perspectives, and applied various technologies to identify effective solutions.
PO b	PROBLEM ANALYSIS	
PO c	DESIGN OF SOLUTION	
PO e	MODERN TOOL USE	
PO i	INDIVIDUAL WORK AND TEAMWORK	In this project, we worked together as a team while also taking on individual responsibilities.
PO j	COMMUNICATION	Working as a team helped us enhance our communication skills.
PO l	LIFE LONG LEARNING	We dedicated significant time to this project and gained valuable knowledge that will serve as lifelong learning.

Knowledge Profile(K's) through our project :

K's	KNOWLEDGE PROFILE	DESCRIPTION
K1, K3	Natural Science, Eng. fundamentals	This project required a strong, theory-based understanding of natural sciences and engineering fundamentals, particularly in databases, SQL, and normalization principles essential to the discipline.
K5	Engineering Design	The project focuses on solving project management challenges. We approached this by creating a clear, step-by-step plan and using tools like ER diagrams and schema diagrams to design an effective solution.
K6	Engineering Practice	Throughout the project, we used various technologies, including online tools for designing diagrams, XAMPP for database implementation, and Google to troubleshoot challenges and find solutions along the way.

The Engineering Problems (P's) through our project:

P's	COMPLEX ENG. PROBLEM-SOLVING	DESCRIPTION
P1	KNOWLEDGE [K1, K3, K5, K6]	The project required a deep understanding of database principles, real-life project management practices, ER and schema diagrams, SQL implementation, and the societal impacts of an efficient project management system.
P5	OUTSIDE PROBLEM	While managing the project, we ran into several challenges that made it necessary for us to seek out information and insights from external sources, mostly by searching on Google, to find effective solutions.
P7	MANY COMPONENTS	Many components contributed to the success of this project, including the group members, the technologies we used, and other key factors.

The Complex Engineering Activities (As) through our project:

A's	COMPLEX ENG. ACTIVITIES	DESCRIPTION
A1	RANGE OF RESOURCES	Resources for this project included structured datasets (table info), SQL-based database management tools (XAMPP), and hardware like servers, and devices. Financial resources were also crucial for system development.
A2	FAMILIARITY	This criterion focuses on making the Project Management System easy for project managers to use. With a simple design, clear steps, and familiar terms, users can quickly get comfortable and stay productive. Offering training and support helps them get the most out of the system.
